

SUMIT HATEKAR

Full Stack Developer

Phone no : +91 7387155502 Email : sumithatekar067@gmail.com Linkedin : linkedin.com/in/sumit-hatekar123/ Location : Pune, India

SUMMARY

Passionate Computer Applications student with a strong foundation in Java and Web technologies. I love building things for the web, from backend APIs with Spring Boot to interactive frontend experiences using React and PixiJS. Always curious to learn new technologies and apply them to solve real-world problems.

SKILLS

Programming Languages: Java, JavaScript (ES6+), SQL, HTML/CSS

Databases: PostgreSQL, Oracle SQL, MySQL

Frameworks & Libraries: React.js, Spring Boot, Hibernate

Tools & Platforms: Git, GitHub, Postman, Docker, Maven, VS Code

Soft Skills: Communication, Teamwork, Problem Solving, Agile

PROJECTS

Resume Maker

September 2025 - December 2025

React, Spring Boot, PostgreSQL, PixiJS, WebGL, Matter.js, Canvas 2D API

<https://resume-maker-pro.netlify.app>

- Built ResumeMaker, a WebGL + DOM-based resume editor powered by a custom DOM-to-WebGL rendering engine for high-performance live previews
- Achieved ultra-fast resume load times of 20–30 ms on desktop and 50–60 ms on mobile with instant text and UI updates
- Architected a config-driven template system allowing highly scalable and reusable resume layouts while preserving ATS-friendly structure
- Delivered high-quality PDF and PNG exports with sharp text rendering and minimal blur using GPU-based rendering

GitHub Issue Finder

July 2025 - August 2025

Java 17, Spring Boot, PostgreSQL, Spring Data JPA, Thymeleaf, Bootstrap 5

<https://github.com/sumit1456/findissue-SpringBoot-Application>

- Developed a Spring Boot web application to search and view open issues across public GitHub repositories using the GitHub REST API
- Implemented backend logic with Spring Data JPA for efficient querying and integrated PostgreSQL for secure data storage
- Built a responsive server-rendered UI using Thymeleaf and Bootstrap 5, documenting APIs with OpenAPI and Swagger

DOM-WebGL Renderer

November 2025 - Present

PixiJS, WebGL, Web Workers, Matter.js, Canvas 2D API

<https://github.com/sumit1456/webgl>

- Built a DOM-to-WebGL rendering engine that captures DOM geometry and style snapshots and renders document-style UIs on the GPU
- Improved rendering performance by 30–40% by offloading heavy geometry and style computations to Web Workers
- Implemented change-based rendering to recalculate only modified elements, reducing unnecessary layout and GPU workload
- Achieved smooth 60 FPS live previews for document layouts, delivering high-fidelity rendering and sharp text output

EDUCATION

Master of Science in Computer Applications (MSc CA)

Savitribai Phule University

2027 (Expected) | 89.63% (First Sem)

HSC (Science)

Yashwantrao Chavan Institute of Science

2021 | 84%

CERTIFICATIONS

- Java Full Stack Development - QSpiders Wakad 2024
